SUMMARY

Final-year IT student and Full Stack Developer with industry experience building scalable, production-grade systems using React, Node.js, and MongoDB. Proven track record across AI SaaS, CI/CD engines, and carbon credit platforms. Strong in REST APIs, real-time systems, and microservices architecture.

EDUCATION

Marathwada Mitra Mandal's College of Engineering, Pune

2022 – Present

B.E. in Information Technology

CGPA: 7.25

SKILLS

Languages: Java, JavaScript, Python, SQL

Tools & Cloud: Git, Docker, Redis, WebSockets, BullMQ, Qdrant

Frontend: React, TypeScript, Tailwind CSS, HTML5, CSS3

Backend & DB: Node.js, Express.js, FastAPI, MongoDB, PostgreSQL

Concepts: DSA, OOP, DBMS, OS, REST APIs, Microservices

AI/ML: spaCy, OpenAI Embeddings, Vector Search, Prompt Engineering

EXPERIENCE

Climkare Sustainability Pvt Ltd

Aug 2025 – Jan 2026

Full Stack Developer Intern

Tech: React, TypeScript, Node.js, Express, MongoDB, Vite, Tailwind CSS, MUI, Framer Motion, IPFS, Solidity, Ethers.js

- Built a Full-Stack Carbon Credit Tokenization & Green Labeling platform with role-based dashboards, protected routing, and 10+ RESTful API modules for credits, batches, transfers, and certificates.
- Wrote two Solidity smart contracts — ERC-1155 (**TokenizeAndBurn**) for batch minting/on-chain retirement and ERC-721 (**GreenLabelNFT**) for auto-minting NFT offset certificates, ensuring 100% tamper-proof audit trails.
- Engineered an automated emission offset pipeline using a greedy token-selection algorithm, on-chain burns via Ethers.js, IPFS metadata pinning (Pinata SDK), and auto-generated verifiable certificates.
- Implemented production-grade security with JWT auth, bcrypt, Joi validation, and API rate-limiting across 10+ Express controllers backed by MongoDB/Mongoose.

PROJECTS

TalentLens | AI Resume Analyzer & Career Coach

Tech: Node.js, FastAPI, React, MongoDB, Redis, BullMQ, Docker, Qdrant, Gemini, Groq, OpenAI, spaCy

- Architected a Full-Stack AI SaaS with Node.js + FastAPI microservices, cutting server CPU load by 45% and supporting 50+ concurrent jobs via BullMQ & Redis.
- Built a Semantic Job-Matching Engine using OpenAI embeddings + Qdrant Vector DB for sub-100ms retrieval; hybrid spaCy NER + TF-IDF pipeline boosted skill extraction by 35%.
- Engineered a Multi-Provider AI Fallback Chain (Gemini → Groq → OpenAI) with exponential backoff, achieving 99.9% uptime and reducing latency by 70% (8s → <2s).
- Designed an AI Resume Coach with STAR/XYZ rewriting, structured JSON output at 99% parse reliability, JWT auth, and S3 pre-signed URL uploads.

VortexCI | Distributed CI/CD Pipeline Engine

Tech: Node.js, React, Docker, Redis, Bull, PostgreSQL, WebSockets, GitHub Webhooks, HMAC-SHA256

- Architected a Distributed CI/CD Engine automating build-test-deploy via GitHub Webhooks (HMAC-SHA256), supporting 500+ concurrent jobs through horizontal scaling.
- Containerized builds with Docker ephemeral + Alpine images, reducing build-start latency by 40% and achieving 0% environment drift across local and production.
- Built a Real-Time Dashboard via WebSocket pub/sub streaming, cutting log delivery latency by 60% (under 100ms) and eliminating polling overhead entirely.
- Engineered a Fault-Tolerant Recovery System with stuck-job detection and auto re-queuing, achieving 99.9% pipeline reliability backed by PostgreSQL step-level metrics.

CERTIFICATIONS

- Deloitte Technology Job Simulation (Forage, 2026)
- Deloitte Data Analytics Job Simulation (Forage, 2026)
- AWS Cloud Foundations (AWS Academy, 2026)
- AWS Cloud Architecting (AWS Academy, 2026)

ACHIEVEMENTS

- 5th Place — Smart India Hackathon (out of 120 teams)
- 4th Place — TECHSPARK 2K26 (out of 30+ teams)
